

Hub bearing kits

A comprehensive range of premium hub bearing kits

When replacing a Generation 1 wheel bearing, evaluate the option of a complete SKF hub bearing kit to meet your needs. Engineered to meet rigorous OE specifications, SKF hub bearing kits contain the wheel flange, a Generation 1 bearing, a c-clip, an axle nut and any required seals.

SKF hub bearing kits promote longer service life and time saving installation. Follow manufacturing guidelines for proper installation and make sure to torque the axle nut during final assembly to provide proper preload for the bearing.

All SKF hub bearings are premium quality parts manufactured using high quality steel and surface finishes, premium seals, OE grade sensors, precision manufacturing techniques and precise assembly tolerances. Each one is 100% tested to the actual OE specifications for fit, form and function.

SKF offers a comprehensive range of hub bearing kits. See reverse side for a complete listing.
